

What would your school do in the event of losing critical data? Would your data be fully protected in the event of the ever growing threat of ransomware attacks?

Our service provides a daily, fully-automated, encrypted and secure online backup of your school's data and secures your data off-site in multiple UK data centres. This assists in complying with the Data Protection Act, ICO and GDPR guidelines.

Whether a single school or a multi academy trust; you decide what data to backup and we take care of the rest. This means that you do not need to remember to start a local backup, change tapes, or take backups off site, giving you a secure, effective method of managing, saving and recovering data for establishments of any size.

With our service, unlike many other providers, charges are based on the amount of data protected. There are no limits or caps and the more you consume the less you pay per GB protected.

Key Features - powered by industry leading cloud backup software, this service includes the following:

- Proven, effective recovery from ransomware attacks by providing you with the ability to roll back your system to recover data prior to any virus attack
- Market leading 6 months data retention period mitigating risk against dormant ransomware and virus infections*
- Support for Virtualised Environments (Image Level Recovery) – allowing you to roll back a device to a previous state for full disaster recovery
- Economies of scale - Data from multiple servers / locations can be aggregated to provide a cost-effective solution across the whole school, MAT or Federation
- Simple monthly billing and pricing structure – helping you manage your budget by only paying for what you actually protect*
- One-stop shop for curriculum and admin backup, including SIMS (Capita accredited)
- Enterprise class 'Cloud-storage' service – more cost effective compared to traditional, onsite manual backup methods with data also mirrored to a 2nd offsite UK data centre for extra resilience
- Reliable and fully-automated service – run backups at a time that suits you to reduce bandwidth consumption and minimise disruption to users
- Managed Service - Scomis service desk support for installation queries, proactive monitoring, guidance and advice, assistance with restoring data from backup, and investigation and resolution of any backup issues; thereby removing the burden from your support staff

*Terms & Conditions apply

- All data securely encrypted prior to transmission and stored on ISO 27001 accredited UK datacentres - giving you reassurance that you are compliant with data protection guidelines from the DfE and the Information Commissioners Office (ICO)
- Free remote installation by a Scomis technician – hassle free

At the heart of everything we do is joined up thinking.
